DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a sensor, classified in class 250, subclass 215.
- II. Claim 14-20, drawn to a method of optimizing the combustion in a combustion engine, classified in class 250, subclass 215.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of using. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the sensor, as described in claims 1-13, can be used in any device and not specifically for optimizing the combustion in a combustion engine environment.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
